## SPECIFICATIONS

HEIGHT:	70.5 in.
WIDTH:	36.5 in. (with Control Panel)
WIDTH	25.5 in. (w/o Control Panel)
DEPTH:	38.5 in.
NET WEIGHT:	275 lbs.
POWER	360 warts
VOLTAGE	120 volts AC
CURRENT	3 Amps

Note: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his/her own expense.

## INTRODUCTION OF THE OWNER'S MANUAL

SEGA ENTERPRISES, LTD., supported by its high electronic technology of LSIs, microprocessors, etc. and a wealth of experience, has for more than 30 years been supplying various innovative and popular game machines to the world market. This OWNER'S manual is intended to provide detailed comments together with all the necessary information covering the operation in general of electronic assemblies, electromechanical servicing control, spare parts, etc. This manual is intended for those who have knowledge of electricity and technical expertise especially in ICs, CRTs, microprocessors, etc. Carefully read so as to acquire sufficient knowledge before working on the machine. Should there be a malfunction, non-technical personnel should under no circumstances touch the interior system.

## HANDLING PRECAUTIONS

When installing or inspecting, be very careful of the following points and pay attention to ensure that the player can enjoy the game safely.

- o Be sure to turn the power off before working on the machine.
- o To insert or pull out the plug quickly is dangerous.
- o It is necessary to make sure that the power cord or the grounding wire is not exposed on the road, etc. in a manner so as to be dangerous. Make sure that grounding connections are made safely at the position where specified.
- o Do not use any fuse that does not meet the specified rating.
- o Make complete connections for the IC board and other connectors. Insufficient insertion is very dangerous.

Also, for the IC board circuit inspections, only the logic probe is allowed. The use of a tester is not permitted, so be careful in this regard. After confirming that there are no irregularities, turn the power ON.

## PREVENTION OF COUNTERFEITING AND CONVERSION

### LABELLING

To prevent counterfeits and conversions, the following labels are put on all the SEGA products.

When handling such goods, be sure to confirm the labels. They are used to prevent illegal acts such as the unauthorized copying of the products and the printed circuit boards thereof or carrying on business by manufacturing similar merchandise or by converting, selling or using such products or printed circuit boards.

The following seal is put on the machines manufactured by SEGA

ORIGINAL SEAL

### COPYRIGHT NOTICE

This SEGA product has the copyright notice as follows:

© SEGA 1991

This signifies that this work was disclosed in 1991 and is the property of  
SEGA ENTERPRISES, LTD.

## **PRECAUTIONS CONCERNING THE PLACE OF INSTALLATION**

This is an indoor game machine. Absolutely do not install it outside. Even indoors, avoid installing in places mentioned below so as to ensure proper usage:

- o Places subject to rain or water leakage, or condensation due to humidity.
- o In the proximity of an indoor swimming pool and/or shower.
- o Places subject to direct sunlight.
- o Places subject to heat sources from heating units, etc., or hot air.
- o Vicinity of highly flammable/volatile chemicals or hazardous matter.
- o Sloped surfaces.
- o Vicinity of anti-disaster facilities such as fire exits and fire extinguishers.
- o Places subject to any type of violent impact.
- o Dusty places.
- o Residential Environment - (See F.C.C. statement below)

## **F.C.C. REQUIREMENTS**

The Federal Communications Commission requires that all Class A equipment be verified and labeled as follows:

**This equipment complies with the requirements in part 15 of FCC Rules for a Class A computing device. Operation of this equipment in a residential area may cause unacceptable interference to radio and TV reception requiring the operator to take what ever steps are necessary to correct the interference.**

This label must be permanently attached in a conspicuous location and the text must be legible. If this label is removed or tampered with, such action is punishable under Section 503 of the Communications Act of 1934 (ACT), as amended.

## SERVICE SWITCHES

When you open the Coin Chute Door, you will notice three switches. From left to right, the first is the Volume Control, second is the Service Switch and the third is the Test Switch. (These switches are also referred to as buttons when explaining the Test Mode functions.)

**Volume Control Pot:** Controls the volume of the speakers.

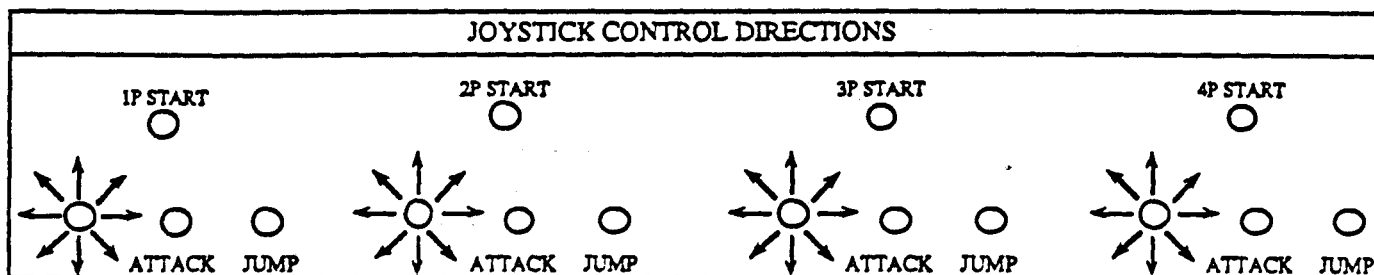

**Service Switch:** Allows you to receive game credits to test the function of the game while maintaining the integrity of the Coin Credit meter. This is used when servicing the game.

**Test Switch:** Used in the Test Mode functions.

## SYSTEM 32 BOARD:

The four player game has a white start button for each player, one red button to control the attack feature, one yellow button to control the jump feature and an eight way joystick.

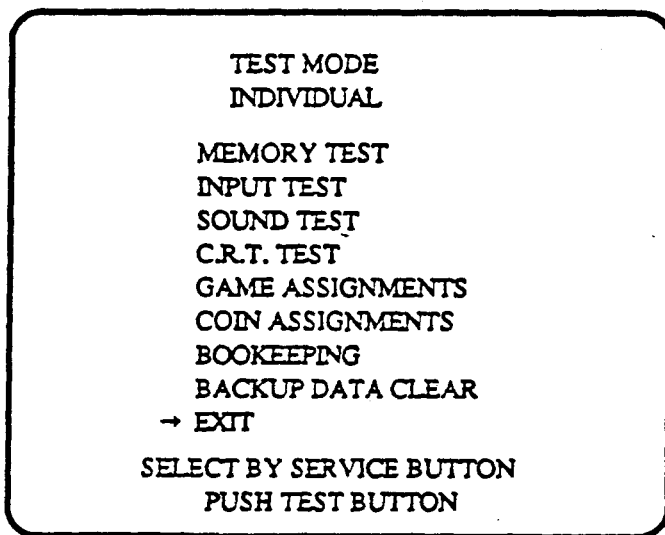

## TEST MODE

The test operation of this game allows you to verify operation of the game memory, input, sound, CRT, and game assignments. The test mode also includes coin assignments, and bookkeeping functions.

Selection of Test Items:

1. Push the TEST SW to cause the following TEST ITEM MENU to appear:

2. When you push the service switch, the arrow (→) will move to the next item on the menu.
3. Press the Test Button to perform the selected function.

**Memory Test.** When this item is selected, a list of Integrated Circuits will appear. Each item will display "Good" or "Bad" to indicate whether or not the IC is functioning properly. If "Bad" appears, it indicates a malfunctioning IC.

```

MEMORY TEST

<ROM>
IC6 GOOD IC7 GOOD
IC13 GOOD IC14 GOOD
<RAM>          IC16 GOOD
IC36 GOOD IC37 GOOD
IC61 GOOD IC62 GOOD
IC63 GOOD IC64 GOOD
IC65 GOOD IC66 GOOD
IC68 GOOD IC69 GOOD
IC70 GOOD IC71 GOOD
IC74 GOOD IC75 GOOD

PUSH TEST BUTTON TO EXIT
  
```

**Input Test.** This test indicates the condition of each switch and potentiometer. To test a switch, operate it. When the switch is in good operating condition, the "Off" will change to "On". If it does not change, it indicates a malfunctioning switch.

```

INPUT TEST

PLAYER  1P  2P  3P  4P

  UP    Off  Off  Off  Off
  DOWN  Off  Off  Off  Off
  RIGHT Off  Off  Off  Off
  LEFT  Off  Off  Off  Off
  ATTACK Off  Off  Off  Off
  JUMP  Off  Off  Off  Off
  START Off  Off  Off  Off
  CON   Off  Off  Off  Off

SERVICE-Off          TEST-Off
PUSH TEST BUTTON TO EXIT
  
```

**Sound Test.** The sound test indicates whether or not the sound in each category is working properly or not. Select the item using the Service Button and then push the Test Button.

**RGB Color Check.** The CRT test allows you to adjust the color of the monitor. The color becomes brighter from left to right.

C.R.T. Test. View the image and make sure that all corners are straight. If the corners are not straight, make the necessary adjustments.

**Game Assignments.**

The monitor allows you to adjust game assignments as follows:

- A. **Game Difficulty:** Values range from 1 to 8. The higher the number, the more difficult the game play. Default setting is 5.
- B. **Vitality:** Values range from 200 to 600. The default setting is 400.

- C. Advertise Sound: Allows you to turn the advertising sound on or off. Default is Off.
- D. Monitor Flip: Should be set to normal.
- E. Cabinet Type: Should be set to 4P.
- F. Start Button: Should be set to Use.

**Coin Assignments.**

The coin chute type is set to individual. The credit to start play is two credits. One coin per chute equals one credit per chute. Fifteen different types of coin credits can be selected. See the coin/chute setting matrix on page 15.

COIN ASSIGNMENTS	
COIN CHUTE TYPE	INDIVIDUAL

	1 COIN COUNTS AS 7 COINS
	1 COIN COUNTS AS 8 COINS
	1 COIN COUNTS AS 9 COINS

Coin chute #3 and coin chute #4 multipliers are the same as for #1 and #2 above.

**Bookkeeping 1/2.** The Coin Chutes #1 through #4 are displayed with the total number of coin drops recorded per chute. The total of all four chutes is recorded under Total Coin. Coin Credits are displayed and the number of times the service switch has been used to gain credits is also recorded. The total of both types of credits are recorded under Total Credit.

**Number of Games:** displays the number of times the game has been played. Total Operating time is displayed in days, hours, minutes and seconds. The total game playing time is displayed in a like fashion. Average game length , Longest game time, and Shortest game time are displayed in hours, minutes and seconds. The utilization factor is displayed as a percentage. To continue, push the Test Button.

The following is a diagram of the Spider-Man Printed Circuit Board Assy #833-8331-04.

FILTER BOARD:

SPIDER-MAN FILTER BOARD 839-0207

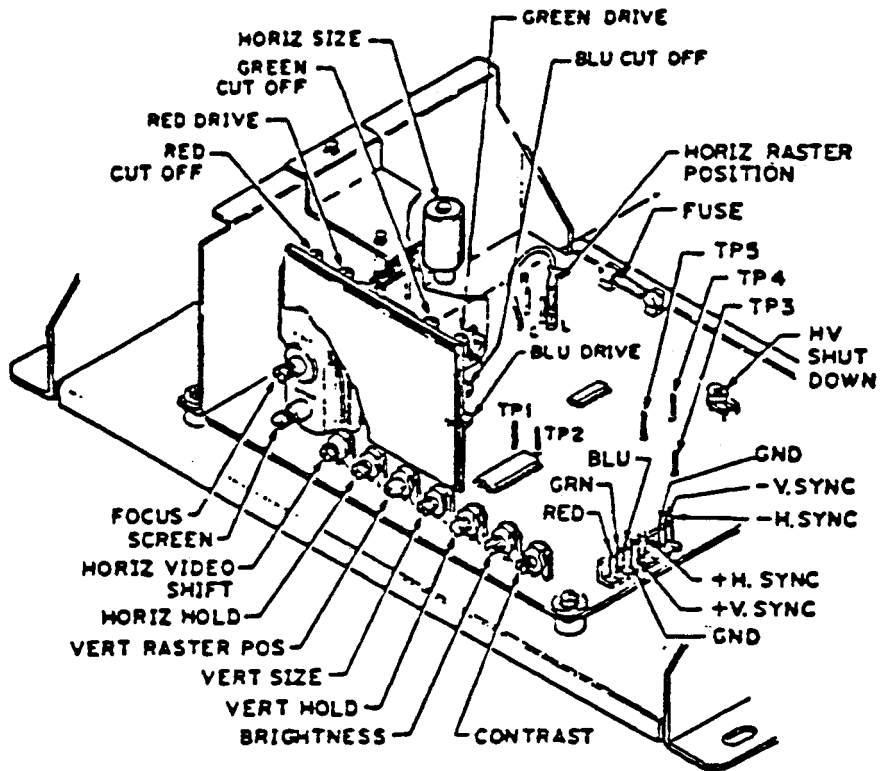

The following matrix displays the location of each IC, its primary function.

## SPIDER-MAN

IC LOCATION	FUNCTION
IC 7 IC 14 IC 6 IC 13	MAIN PROGRAM
IC 22 IC 26 IC 31 IC 35	SOUND
IC 25 IC 29 IC 34 IC 38	SCROLL
IC 24 IC 28 IC 33 IC 37 IC 23 IC 27 IC 32 IC 36	OBJECT

# Monitor Adjustments

## **In Case of Difficulty**

### **No Raster/No Video**

- Check A.C. line cord
- Check line fuse
- Check monitor brightness
- Check power switch and/or interlock switch
- Check all solder connections on line filter and transformer
- Check for proper orientation of the 56 pin PCB connector

### **Raster/No Video**

- Check all PCB to monitor connections
- Check power supply voltage on PCB

### **No Video/Game sounds can be heard**

- Check monitor brightness
- Check all PCB to monitor connections

### **Incorrect Colors**

- Monitor needs degaussing
- Check for proper wiring between PCB and monitor
- Check monitor adjustment and adjust if necessary

### **Wavy Picture**

- Check monitor ground is properly connected to monitor
- Be certain sync inputs are properly connected to monitor
- Check horizontal hold adjustment

### **Vertical Roll/Horizontal Tear**

- Check horizontal and/or vertical hold adjustments
- Check for proper wiring of sync from PCB to monitor

### **No Sound**

- Check volume control potentiometer adjustment
- Check for + 12 volts on edge connector of PCB
- Check wiring from PCB to speaker
- Check speaker for low resistance between the "+" and "-" tabs

### **Bad Sound**

- Check wiring to speaker for bad solder connections
- Check sound with another speaker

### **No Switch Input**

- Check ground connection to switches
- Check wiring between PCB and switches for proper connection
- Check switches with an-ohm meter to verify proper operation

### **Switch Operates Incorrect Function**

- Check wiring between PCB and switches for proper orientation
- Check wiring for shorts between switch inputs

### **No Coin Meter**

- Check wiring to coin meter
- Check that + 5 volts is on + side of meter
- Verify a + 5 volt meter is used

### **When coin switch is made and meter pulses, the screen blanks out and/or game resets**

- Verify that a meter with a diode is used
- If no diode is built in meter a 1N4004 can be used across the meter. Cathode to "+" side of meter and anode to "-" side of meter.

Final Assembly, SPIDER-MAN # 999-0101
