About Photosensitive Seizures

A very small percentage of people may experience a seizure when exposed to certain visual images, including flashing lights or patterns that may appear in video games. Even people who have no history of seizures or epilepsy may have an undiagnosed condition that can cause these "photosensitive epileptic seizures" while watching video games.

These seizures may have a variety of symptoms including: lightheadedness, altered vision, eye or face twitching, jerking or shaking of arms or legs, disorientation, confusion, or momentary loss of awareness. Seizures may also cause loss of consciousness or convulsions that can lead to injury from falling down or striking nearby objects.

Immediately stop playing and consult a doctor if you experience any of these symptoms. Parents should watch for or ask their children about the above symptoms—children and teenagers are more likely than adults to experience these seizures.

The risk of photosensitive epileptic seizures may be reduced by:

- sitting farther from the television screen,
- using a smaller television screen,
- playing in a well-lit room, and
- not playing when you are drowsy or fatigued.

If you or any of your relatives have a history of seizures or epilepsy, consult a doctor before playing.

Avoid Damage to Your Television

Do not use with certain televisions. Some televisions, especially front- or rear-projection types, can be damaged if any video games, including Xbox games, are played on them. Static images presented during the normal course of game play may "burn in" to the screen, causing a permanent shadow of the static image to appear at all times, even when video games are not being played. Similar damage may occur from static images created when placing a video game on hold or pause. Consult your television owner's manual to determine if video games can be safely played on your set. If you are unable to find this information in the owner's manual, contact your television dealer or the manufacturer to determine if video games can be played on your set.

Other Important Health and Safety Information

The Xbox video game system documentation contains important safety and health information that you should read and understand before using this software.

Unauthorised copying, reverse engineering, transmission, public performance, rental, pay for play, or circumvention of copy protection is strictly prohibited.

HINTS AND TIPS

DON'T GET GREEDY WITH LIGHTSABER ATTACKS.

The best strategy is to take one swing at an opponent, then fall back to wait for another opening.

THE BEST OFFENSE IS A GOOD DEFENCE.

Active Block is the best way to cut through a tough opponent's defence. Let your opponent make the first move, then use Active Block to gain an opening.

SOME TIMES OBI-WAN'S DIRECT PATH ISN'T RIGHT IN FRONT OF HIM.

Make liberal use of the LOOK button to keep familiar with your surroundings and stay on track.

DEAL WITH FOES BRANDISHING BLASTERS QUICKLY.

This will give you more time to deal with hand-to-hand foes. The best strategies are to either Force Pull their weapons away or reflect their shots right back at them.
