INTRODUCTION

The Corvette's first-ever appearance was at the GM Motorama, held at the Waldorf Astoria hotel in New York City. June 30, 1953 saw the very first Corvette roll off the production line. A temporary pilot assembly facility in Flint, Michigan produced 300 1953 Corvette vehicles by the end of the year, all of them white with red interiors and all with Powerglide automatic transmissions mated to 150hp, six cylinder engines. 50 years have passed and there have been some very remarkable moments in Corvette's illustrious history. Corvette is now America's Performance Icon, boasting a tremendous 405 horsepower in the 2003 Corvette Z06. How's that for evolution?

We're going to take you on a trip through the history of Corvette. You're going to jump into a 1953 Corvette convertible and pin the pedal all the way down Route 66. You'll have the trip of a lifetime, racing all of your favorite Corvette vehicles, picking and choosing from every production Corvette ever made as well as some custom models like the 620 horsepower C5-R.

If you've ever owned, driven, or dreamed of a Corvette, this is the game of your lifetime.

LET'S GET GOING

If you've already saved here, you will be given a warning message that you can overwrite the Saved Game. Choose YES or NO. Make sure you save at the end of every game session or your progress will be lost.

LOADING - To load any previous Saved Games go to the Load/Save Menu from the Main Menu. Scroll down to LOAD and press the X button. Select the Saved Game file you want to load and press the X button. This will load all of your options and all progress you have made through the game.

Arcade Mode - Choose your favorite stock Corvette and compete in a series of arcade-style races.

Special Modes - There are several special modes that can be unlocked in Career and Arcade Mode. See the Game Modes section of the manual for more information.

RACE DISPLAY

Whether you're out on the track or tearing up the highway, you'll be able to see all of the important information about your current race on the screen.

SPEEDOMETER - When you're on the open road in a Corvette it's tempting to ignore the speed limit. However, Ol' Smokey is out to get you, so keep a close eye on the speedometer. On the track, it's a different story! You can go as fast as you want, but make sure you don't go into a turn too hot or you won't make it out. The appearance of the speedometer depends on what view you choose to drive in and what Corvette you are driving.

TACHOMETER - This tells you how fast your engine is revving. It's important to monitor this when you're driving with a manual transmission. If you shift gears too early you'll lose power; shift too late and you may slow yourself down.

TRACK MAP - When you're racing on a circuit track this map will show you the track layout and your position in the race.

LAP TIME - In the upper right-hand corner of the screen you'll see a list of lap times. The highlighted time shows your most current lap time in minutes, seconds, and hundredths of a second.
